INTELLIGENT CIRCULATOR FOR COMMERCIAL MARKET

GEM serial are intelligent efficiency circulation pumps equipped with permanent magnet motor and intelligent pressure control system. It adopts canned structure, the motor stator is completely canned, the rotating parts are immersed in the conveying liquid, the liquid plays the role of cooling the motor and lubricating the bearings. The product has features such as no leakage, super quiet, energy saving, high efficiency, etc.

INTELLIGENT CIRCULATOR FOR COMMERCIAL MARKET

GEB25/32 shielded pump, used in single pipe system, double pipe system, cooling/heating water circulation system, etc, with PWM control optional, with the advantages of high comfort, low noise, low energy consumption.

PUMP CONFIGURATION

- Motor: **High efficiency permanent magnet motor**;
- Pump shaft: **Stainless steel** shaft + **Tungsten carbide** spray treatment or brown **ceramic** shaft;
- Bearing: **Ceramic**;
- Thrust bearing: **Graphite carbon**;
- Impeller: PES + 30GF%/brass insert.

PUMP FEATURES

- Class A energy efficiency, **EEI \leq 0.23**;
- Permanent magnet motor intelligent frequency control;
- Proportional pressure mode;
Constant pressure mode;
Constant speed mode;
- Low noise, No leakage.

APPLICATION LIMITS

- Installed in the heating circulation system;
- Operating conditions:
Ambient temperature: **0~40°C; 0~104°F**
Ambient humidity: **<95%**; Liquid
temperature: **2°C~110°C; 35.6°F - 230°F**
The ambient temperature is lower than the liquid
temperature to prevent condensate liquid inside
the motor;
- Liquid material: non-corrosive, non-explosive
liquid, no solid particles, fiber and mineral oil;
- Use requirements: Do not run more than 10s
without water;

PWM CONTROL

EXTERNAL CONTROL VIA A PWM SIGNAL

The actual/setpoint level assessment required for control is referred to a remote controller. The remote controller sends a PWM signal as an actuating variable to the GEB pump. The PWM signal generator gives a periodic order of pulses to the pump (the duty cycle), according to DIN IEC 60469-1. The actuating variable is determined by the ratio between pulse duration and the pulse period. The duty cycle is defined as a ratio without dimension, with a value of 0 ... 1 or 0 ... 100%. This is explained in the following with ideal pulses which form a rectangular wave.

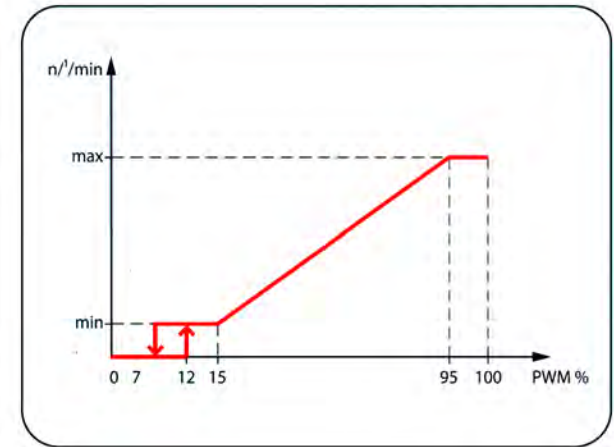

PWM GT SIGNAL LOGIC 1 (HEATING):

PWM INPUT SIGNAL [%]

- < 5 Pump runs at maximum speed
- 5-85 to Pump minimum speed decreases linearly from maximum
- 85-93 Pump runs at minimum speed (operation)
- 85-88 Pump runs at minimum speed (start-up)
- 93-100 Pump stops (Standby)

PWM SRSIGNAL LOGIC 2 (SOLAR):

PWM INPUT SIGNAL [%]

- < 7 Pump stops (Standby)
 - 7-15 Pump runs at minimum speed (operation)
 - 12-15 Pump runs at minimum speed (start-up)
 - 15-95 Pump speed increases linearly from minimum to maximum
 - > 95 Pump runs at maximum speed
- Signal frequency: 150 Hz-5000 Hz
 Signal amplitude: 2.8V-24V
 Signal polarity: none

INTRODUCTION: YOUR PERFECT CONTROL MODE

6 Modes

Intelligent control saves time and energy

Constant pressure mode

Proportional pressure mode

Constant speed mode

AUTOADAPT mode

FLOWADAPT control mode

Temperature control mode

Constant pressure mode

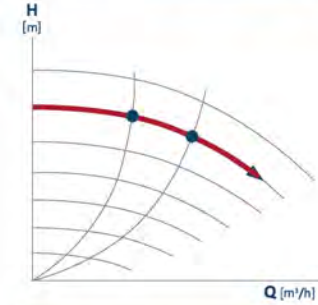

Constant pressure control is used to adjust pump performance based on actual system heat demand, but the pump performance curve will depend on the desired pump curve.

Proportional pressure mode

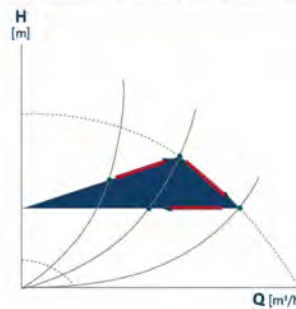

Proportional pressure control is used to adjust the pump performance according to the actual system heat demand, but the pump performance depends on the desired pump curve PP1, PP2 or PP3. Three gears are adjustable, namely small, medium and large.

Constant speed mode

At constant speed, the pump runs at a constant speed, independent of the actual flow demand of the system, and the performance of the pump is determined according to the required power curve.

AUTOADAPT mode

During operation, the system will regulate the performance of the pump according to the flow rate required by the user. The water pump is under proportional-pressure control. The system adaptively adjusts the pump performance within a certain area so that the pump works at a high efficiency.

FLOWADAPT control mode

When the FLOWADAPT control mode is selected, the pump will run AUTOADAPT and ensure that the flow rate does not exceed the limited flow rate value. This control mode is suitable for systems that need to limit the maximum flow. Pumps in boiler applications where a steady flow through the boiler is required, no extra energy is used for pumping too much liquid into the system.

Temperature control mode

This control mode is suitable for systems with fixed system characteristic curves, and the pump can be controlled according to the temperature sensor feedback of the system to make it work under the working conditions required by the user.

INTRODUCTION: PUMP CONFIGURATION

This product has three advantages: PES engineering plastic impeller, tungsten carbide treated stainless steel rotor shaft, and high power permanent magnet synchronous motor.

INTRODUCTION: 25/32 CALIBRE SERIES PRODUCT PARAMETERS

POS.	COMPONENT	CONSTRUCTION CHARACTERISTICS
1	PUMP HEAD	Cast iron surface electrophoresis treatment, exterior painting treatment
2	IMPELLER	Hydraulic model, equipped with PES engineering plastic impeller
3	STAINLESS STEEL COVER	Stainless steel material
4	SHIELDING SLEEVE	Stainless steel material, the inner wall is mirror-finished
5	BARREL	Aluminum alloy barrel, the surface is treated with black electrophoresis.
6	CASING	Plastic spray outside
7	DRIVER	Electronic device
8	CONTROL BOARD	Electronic device
9	Cover	Using high-strength plastic, soft touch texture, secondary vulcanization treatment of sealant, beautiful and fashionable appearance
10	BEARING	Brown ceramic
11	ROTOR	Brown ceramic
12	FOAM	Black EPP material, with the characteristics of heat preservation and safety protection.
